# How to change OPPO 93 / 95 Clock.

1.take out main board.

2. remove 3 crystal (25, 27 and 20 MHz) and resistor, capacitors etc as shown below. I recommend Weller hot air gut to take out components from the main board. it would take 4-5 minutes to be melterd.
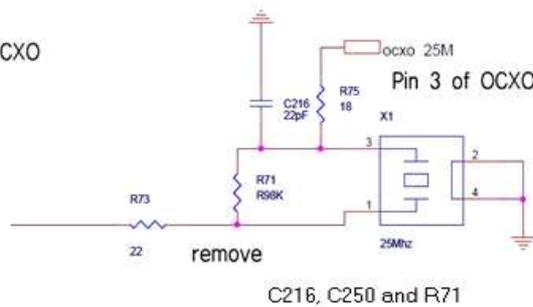

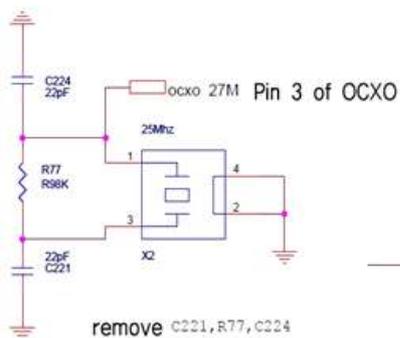

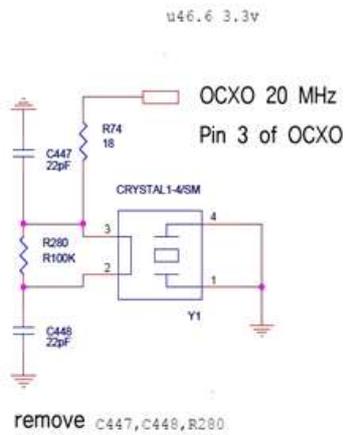

3. Solder very thin wires to main board as shown place.
I recommend to use inner wires from LAN cable. twist both wires (clock and
   ground wires)
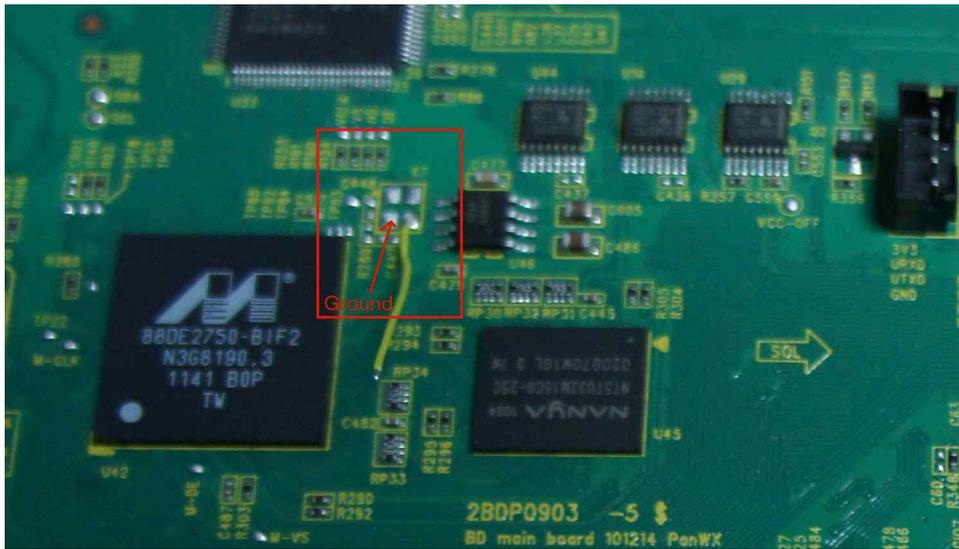

20MHz
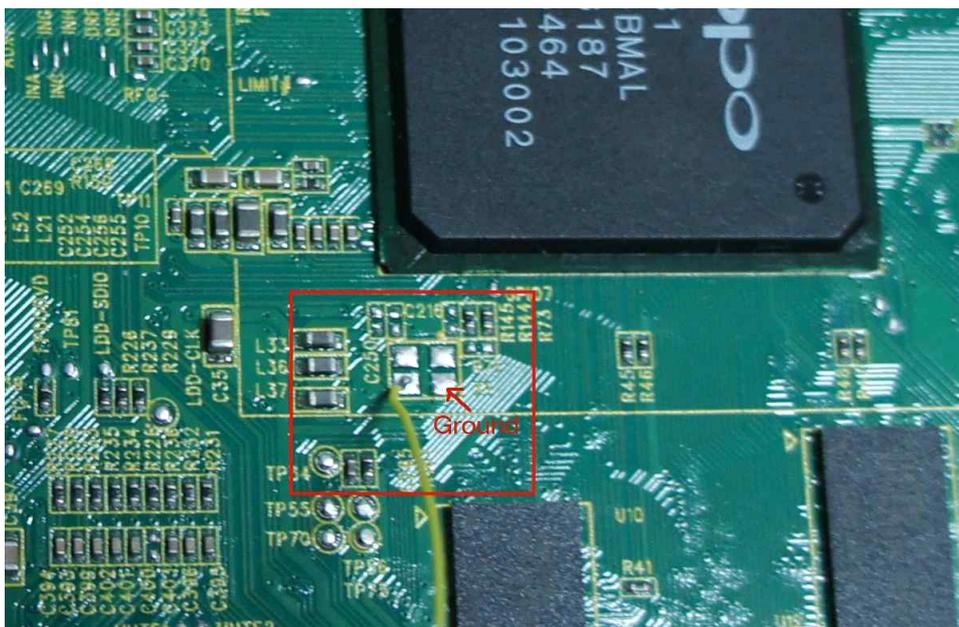

25MHz
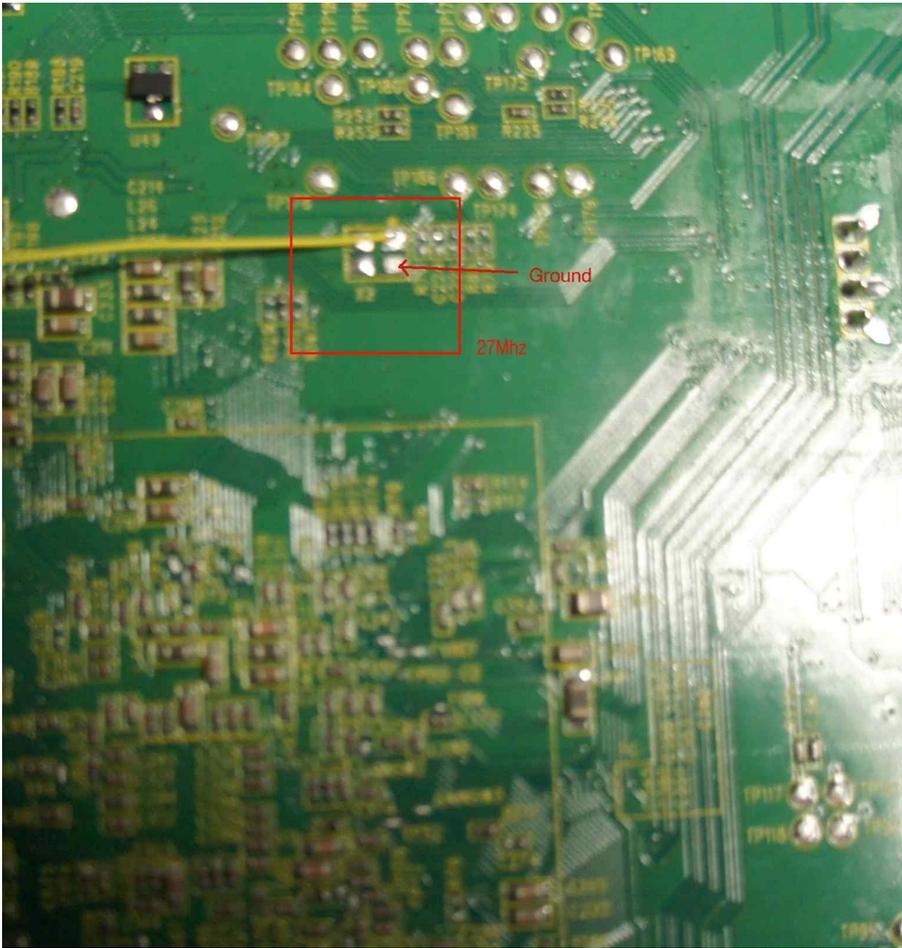

27 MHz

4. get the power source for TCXO PCB from 6-8 V form linear power module
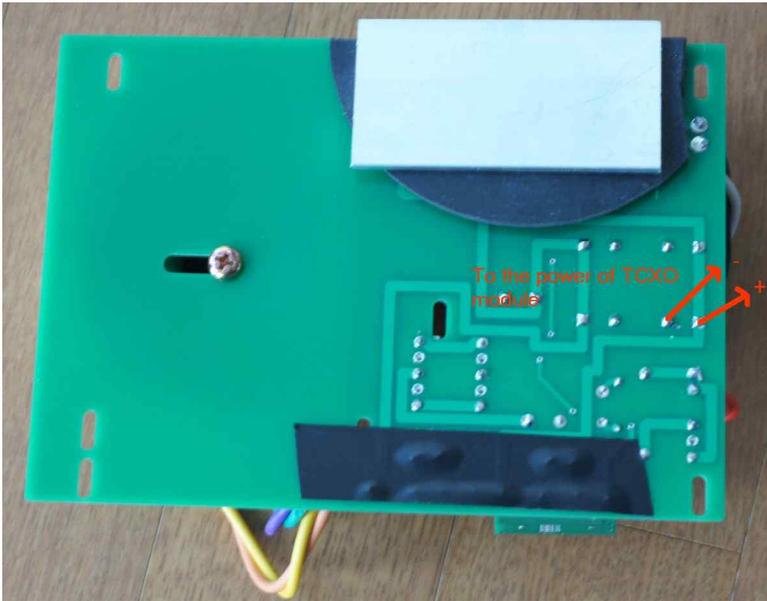

for OPPO 95 LPM
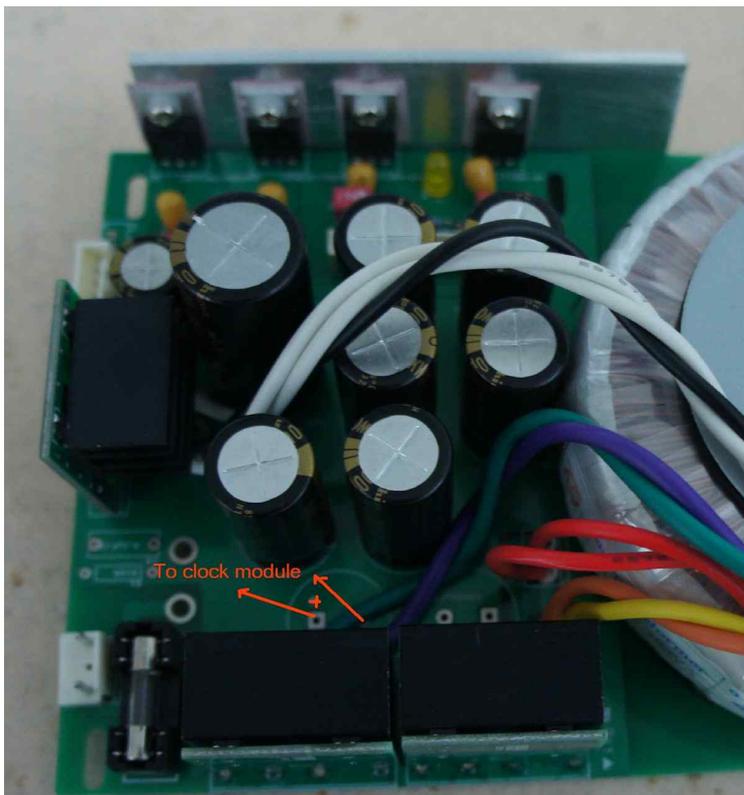

for OPPO 93 LPM
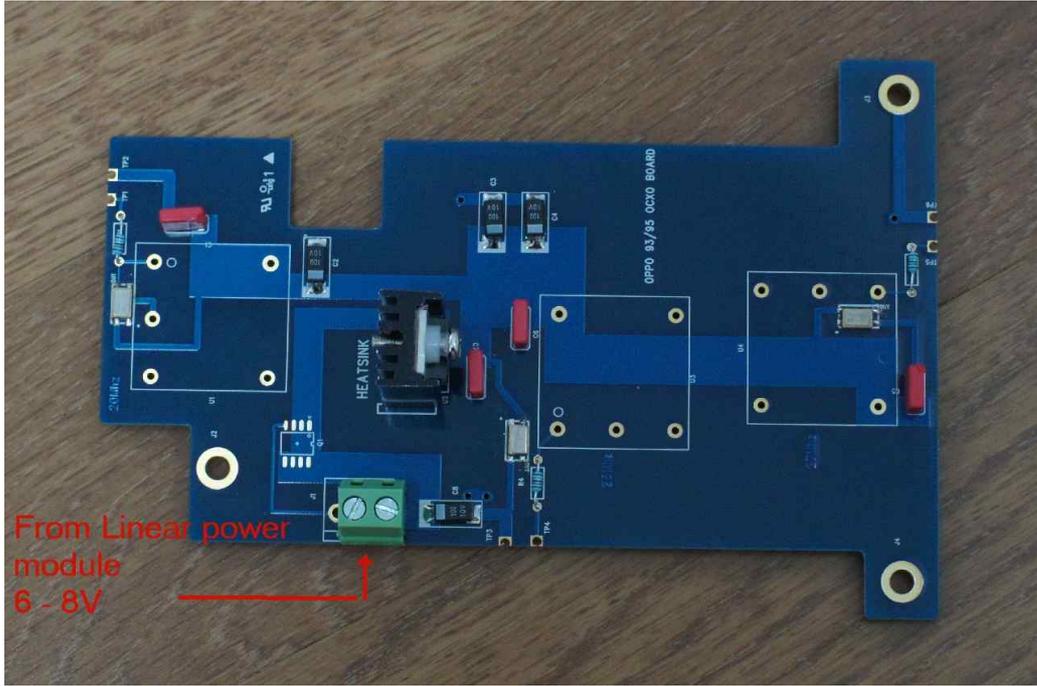

5 . place T C X O P C B on the t h e CPU heat sink and mount with screws .

6. connect the thin wires to TCXO pcb .
